

HAMMER MOUNTING APPARATUS**ABSTRACT**

A hammer mounting apparatus includes a main frame having a front face and a rear face. A slide assembly is connected to the front face of the main frame. The slide assembly includes two elongated guides having an upper and lower end, stops, two elongated followers shorter in length than the guides and a slide. Each guide is bordered on its upper and lower end by a stop, the guides are positioned about the followers and the followers are rigidly connected to the slide. A tool mounting clamp is connected to a face of the slide of the slide assembly. A mounting flange is connected to the rear face of the main frame. Two tool handle mounts are also connected to the main frame.
